

Model 977 Digital Audio Converters Installation and Use

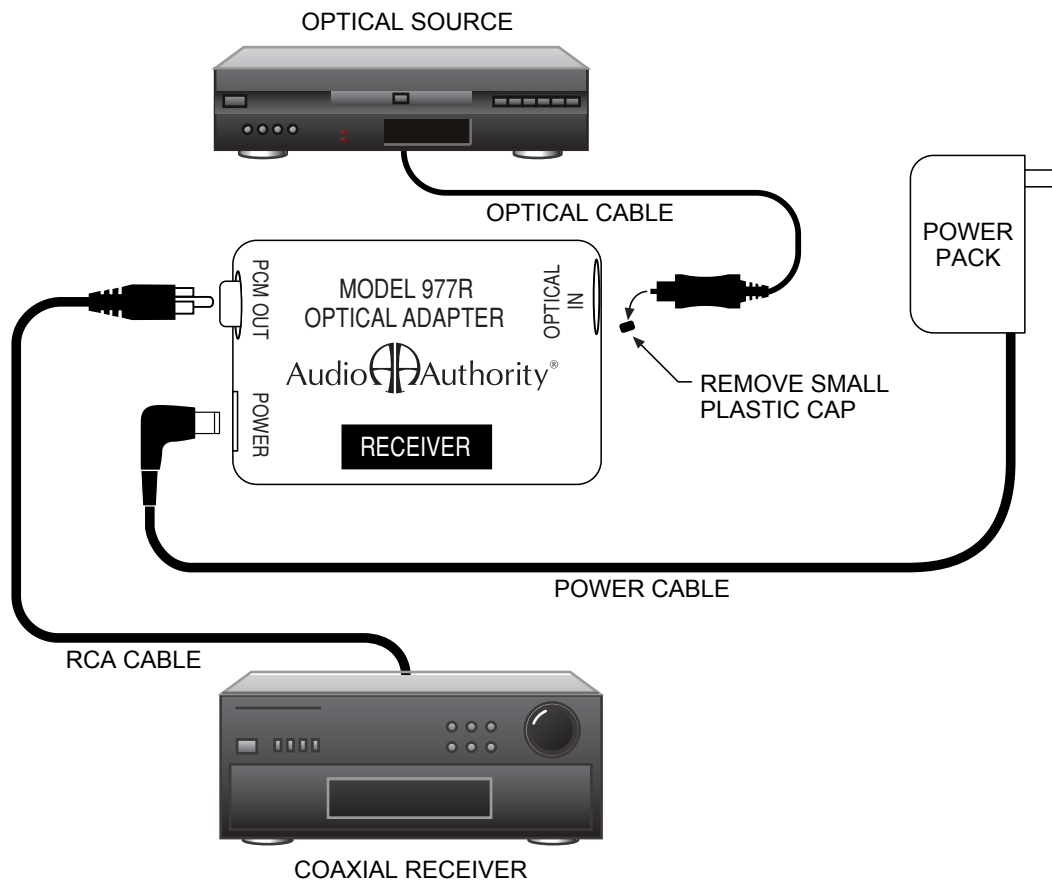

The Model 977R and 977T allow digital audio home theater products that have only optical jacks to interface with products or switching systems that have coaxial jacks.

A/V sources use the 977R to convert *optical* digital signals (traveling on a Toslink™ fiber optic cable) to *electrical* digital signals (which travel on a copper RCA patch cable). See example below.

The 977T converts in the opposite way. An RCA cable carrying electrical digital audio signals converts to optical digital signals (carried by a Toslink™ cable) to a receiver's optical input.

Connect the power pack to the POWER jack on the 977R or 977T. Remember to remove the small plastic cap from both ends of the optical cable.
