

## Model 09770RPO Digital Audio Converter Installation and Use

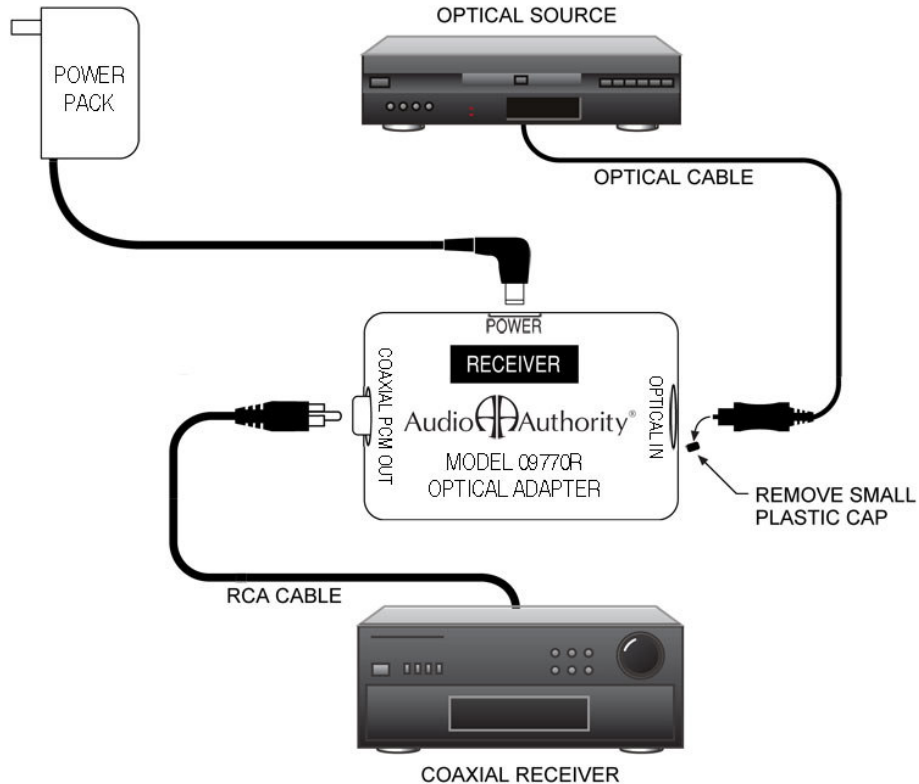

The Model 09770RPO and 09770TPO allow digital audio home theater products that have only optical jacks to interface with products or switching systems that have coaxial jacks.

A/V sources use the 0977RPO to convert optical digital signals (traveling on a Toslink™ fiber optic cable) to electrical digital signals (which travel on a copper RCA patch cable). See example below.

The 09770TPO converts in the opposite way. An RCA cable carrying electrical digital audio signals converts to optical digital signals (carried by a Toslink™ cable) to a receiver's optical input.

Connect the power pack to the POWER jack on the 09770RPO or 09770TPO. Remember to remove the small plastic cap from both ends of the optical cable.
