

Command	Serial String	Valid Range	Description
			osure (Audio Override)
		U1-4, CC1-2, T0-1 (0 audio override, 1	Set the effect of the audio override contact closure inputs on the back panel of the unit. By default, the contact closure inputs activate the matching audio override (contact closure 1 activates audio override 1, contact closure 2 activates audio override 2). Alternatively, the contact closures can be used to load one or two scene presets. On contact closure, argument A scene will be loaded. On contact closure open, argument B scene will be loaded, or if the scene number is specified to be 0, nothing will happen; this allows a scene to be loaded on
Contact Closure Type	[U#CC#T#A##B##]	released, or 0 for none)	closure and one to be loaded (or nothing to happen) on release.
Contact Closure Mode	[U#CC#M#]	U1-4, CC1-2, M0-1 (0 momentary, 1 toggle)	Sets the mode of the audio override contact closure inputs on the back panel of the unit. Momentary mode causes the action when the contacts are closed and opened. Toggle mode requires a close and open for each action.
			Ethernet
Commit	[U#EC]	U1-4	Commit changes that have occurred to the Ethernet settings. This command must be issued after you have finished changing DHCP, IP, Gateway, or Netmask settings in order to cause them to become active. Note that any Telnet client connected will be disconnected when this command is issued.
DHCP	[U#DHCP#]	U1-4, DHCP0-2 (0 off, 1 on, 2 toggle)	Change the dynamic host configuration protocol (DHCP) setting. This protocol is used to allow the device to receive IP address settings automatically from a properly enabled network. Note that a commit is required after changing this setting.
Gateway	[U#GW###.###.###.###]	U1-4, GW (0.0.0.0 - 255.255.255.255)	Change the gateway setting. The gateway is used to communicate with devices that are not inside the subnet (devices external to the router or switch). Note that a commit is required after changing this setting.
IP Address	[U#IP###.###.###]	U1-4, IP (0.0.0.0 - 255.255.255.255)	Set the static IP address; DHCP off required. Note that a commit is required after changing this setting.
Network Mask	[U#NM###.###.###]	U1-4, NM (0.0.0.0 - 255.255.255.255)	Set the subnet mask; DHCP off required. Note that a commit is required after changing this setting.
Query	[U#QE]	U1-4	Query the current Ethernet settings - DHCP, IP Address, subnet mask, gateway, mac address, commit status.
			Front Panel
Dim	LI IADIWAI	U1-4, DIM0-3 (0 = 100%, 1 = 75%, 2 =	Cate the hylichteness level of the frent panel display and lights
Dim IR	[U#DIM#] [U#FPIR#]	50%, 3 = 25%) U1-4, FPIR0-2 (0 off, 1 on, 2 toggle)	Sets the brightness level of the front panel display and lights.  Enable/disable the front panel IR sensor.
	-		Front panel lock. Locks out front panel input (keyboard, knob) to prevent changing system settings from the front panel. In the event that it is not convenient to turn the lock off via serial or telnet, there is an escape
Lock	[U#FPL#]	U1-4, FPL0-2 (0 off, 1 on, 2 toggle)	sequence that you can press on the keyboard to unlock the unit - press menu, back, dim, back, dim, dim.
Sleep	[U#SLEEP#]	U1-4, SLEEP (0, 1, 2, 5 in minutes)	Sets the front panel VFD sleep timer time, in minutes. A time of 0 never sleeps.  Groups
٨ ما ما	[] [#0##0##4]	114 4 04 40 04 40	•
Add Mute	[U#G##O##A] [U#G##M#]	U1-4, G1-10, O1-16 U1-4, G1-10, M0-2 (0 off, 1 on, 2 toggle)	Adds a single output or stereo pair to a group.  Sets the mute status of a group. Toggling mute status will result in all the members of the group being set to same mute status as the first member; if that member is muted, all will be unmuted, and vice versa.
Name	[U#G##N"@"]	U1-4, G1-10, N (16 characters a-z, A-Z, 0-9,,/!?\)	Names the specified group.
Dower	II 1#O##D#1	114 4 C4 40 D0 2 (0 off 4 on 2 toggle)	Sets the power status of a group. Toggling power status will result in all the members of the group being set to the same power status as the first member; if that member is powered off, all will be powered on, and vice
Power	[U#G##P#] [U#G##Q]	U1-4, G1-10, P0-2 (0 off, 1 on, 2 toggle) U1-4, G1-10	
Query Remove	[U#G##Q] [U#G##O##R]	U1-4, G1-10 U1-4, G1-10, O1-16	Query a group, which displays group membership and name.  Removes a single output or stereo pair from a group.
Remove All	[U#GR]	U1-4	Clears the group membership of every group.
Switch	[U#G##I##]	U1-4, G1-10, I1-20	Switch the outputs in the group to the specified input, based upon the mono/stereo status of the input(s) and output(s).
Volume	[U#G##V##]	U1-4, G1-10, V-80-0 (dB)	Sets the output volume of a group.
			Decrements the output volume of all members in the group from their current volume setting. This way it is possible to set different members of the group to different volumes and retain the difference while turning them
Volume Down Volume Up	[U#G##VD]	U1-4, G1-10 U1-4, G1-10	all up or down.  Increments the output volume of all members in the group from their current volume setting. This way it is possible to set different members of the group to different volumes and retain the difference while turning them all up or down.

		Input S	pecific Commands
			Set the level of digital input gain on a stereo pair or mono input channel. This feature is designed to equalize
Gain	[U#I##G##]	U1-4, I1-20, G-10-10 (dB)	the input volumes of sources that do not have volume control.
Gain All	[U#XG##]	U1-4, G-10-10 (dB)	Set the level of digital input gain on all inputs.
Name	[U#I#N"@"]	U1-4, I1-20, N (16 characters a-z, A-Z,	Names the specified input stereo pair or mono source for front panel display.
Name	[0#1#11 @ ]	0-9,,/!?\)	Sets an input pair as stereo or mono, which defines how stereo or mono outputs will connect to the input. For
		II1-4 I1-20 STEREO0-2 (0 off 1 on 2	example, a stereo input of (1,2) will be selected by a stereo output as (1,2), but a mono output as (1+2). A
Stereo	[U#I##STEREO#]	toggle)	mono input of 1 will be selected by a mono output as 1, but a stereo output as (1,1).
			Specific Commands
			Set the balance level of an output. This setting is a negative volume offset applied each time the volume level
Balance	[U#O##BAL##]	U1-4, O1-16, BAL-40-0 (dB)	is set for the output.
			Adjust the balance level for the specified output pair to the left (decreasing the output volume of the right
Balance Left	[U#O##BALL]	U1-4, O1-16	output).
Balance Right	[U#O##BALR]	U1-4. O1-16	Adjust the balance level for the specified output pair to the right (decreasing the output volume of the left
Balarice Rigiti	[U#U##BALK]	U1-4, O1-16 U1-4, O1-16, M0-2 (0 off, 1 on, 2	output).
Mute	[U#O##M#]	toggle)	Change the mute status of an output.
Mute All Global	[XM#]	M0-2 (0 off, 1 on, 2 toggle)	Change the mute status of all outputs.
Mute All	[U#XM#]	U1-4, M0-2 (0 off, 1 on, 2 toggle)	Change the mute status of all the outputs of the specified unit.
	[•	U1-4, O1-16, N (16 characters a-z, A-Z,	go dio mado datas o amaio dapas o amo sposmo dama
Name	[U#O#N"@"]	0-9,,/!?\)	Name the specified single output or stereo pair.
			Set the power status of a single output or stereo pair. An output that is powered from off to on will be checked
Power	[U#O#P#]	U1-4, O1-16, P0-2 (0 off, 1 on, 2 toggle)	to confirm that the output volume level fits into allowed limits and may be adjusted.
Davis All Olahal	IVD#I	D0 0 (0 off 4 on 0 to only)	Set the power status of all outputs. If power status is toggled, each output will be toggled individually, where
Power All Global	[XP#]	P0-2 (0 off, 1 on, 2 toggle)	outputs that are off will be turned on and outputs that are on will be turned off.  Set the power status of all outputs in the specified unit. If power status is toggled, each output will be toggled
Power All	[U#XP#]	U1-4, P0-2 (0 off, 1 on, 2 toggle)	individually, where outputs that are off will be turned on and outputs that are on will be turned off.
Query	[U#O##Q]	U1-4, O1-16	Query a specified output, which displays all settings related to that particular output.
quoiy	[On Onn Q]	011,0110	Enables or disables the pairing of outputs. Stereo mode causes two outputs to track each other when
			performing all functions, and also controls the manner in which inputs are connected to the outputs. For
		U1-4, O1-16, STEREO0-2 (0 off, 1 on,	example, consider a pair of stereo outputs (1,2), a mono output (3), a pair of stereo inputs (5,6) and a mono
Stereo	[U#O##STEREO#]	2 toggle)	input (7). Valid connections will be (1,2) = (5,6) or (7,7), and (3) = (5+6) or (7).
Switch	[U#O##I##]	U1-4, O1-16, I1-20	Switches the single output or stereo pair to the specified single input or stereo pair.
Switch All Global	[XI##]	I1-20	Switches all outputs to the specified input observing mono/stereo connection rules.
Switch All	[U#XI##]	U1-4, I1-20	Switches all outputs of a unit to the specified input observing mono/stereo connection rules.
Volume	[U#O##V###]	U1-4, O1-16, V-80-0(dB)	Set the output volume of a single output or stereo pair.
Volume Down	[U#O##VD]	U1-4, O1-16	Increment the volume of a single output or stereo pair.
Volume Up	[U#O##VU]	U1-4, O1-16	Decrement the volume of a single output or stereo pair.
Volume All Global	[XV###]	V-80-0 (dB)	Set the output volume level of all outputs.
Volume All Down Global	[XVD]		Increments the output volume level of all outputs from their current setting.
Volume All Up Global	[XVU]		Decrements the output volume level of all outputs from their current setting.
Volume All Unit	[U#XV###]	U1-4, V-80-0 (dB)	Set the output volume level of all outputs of a unit as specified.
Volume All Unit Down	[U#XVD]	U1-4	Increments the output volume level of all outputs of a unit from their current setting.
Volume All Unit Up	[U#XVU]	U1-4	Decrements the output volume level of all outputs of a unit from their current setting.
			Sets the maximum volume level of an output. Note that this setting also directly affects the nominal output volume, the current 'live' output volume, override levels, the maximum turn on volume, the minimum turn on
			volume, and scene preset volumes. If any of these contain a level that exceeds the maximum, they will be set
Volume Max	[U#O##MV###]	U1-4, O1-16, MV-80-0 (dB)	to the maximum.
		, , , , - , - , - , - , - ,	Sets the maximum turn on volume. After a power cycle or return from standby, the desired output volume will
Volume Max Turn On	[U#O##MXTO###]	U1-4, O1-16, MXTO-80-0 (dB)	be checked against this, and any levels exceeding will be set to the maximum.
			Sets the minimum turn on volume. After a power cycle or return from standby, the desired output volume will be
Volume Min Turn On	[U#O##MNTO###]	U1-4, O1-16, MNTO-80-0 (dB)	checked against this, and will be set to this level if too low.

			Basic DSP
			Set the bass boost level of a single output or stereo pair. This requires that the output biquad filter 1 is a low
Bass	[U#O##BASS##]	U1-4, O1-16, BASS-15-15 (dB)	shelf filter.
	TI 1//0 // // D A 00 D I		Decrement the bass boost level of a single output or stereo pair. This requires that the output biquad filter 1 is a
Bass Down	[U#O##BASSD]	U1-4, O1-16	low shelf filter.  Increment the bass boost level of a single output or stereo pair. This requires that the output biguad filter 1 is a
Bass Up	[U#O##BASSU]	U1-4. O1-16	low shelf filter.
Баос Ор	[enembrees]	U1-4, O1-16, LD0-2 (0 off, 1 on, 2	Turns on or off loudness for a single output or stereo pair. This requires that output biguad filter 3 is a low shelf
Loudness	[U#O##LD#]	toggle)	and biquad filter 4 is a high shelf.
	, , , , , , , , , , , , , , , , , , ,	114 4 04 40 TRED 45 45 (IR)	Set the treble boost level of a single output or stereo pair. This requires that the output biquad filter 2 is a high
Treble	[U#O#TREB##]	U1-4, O1-16, TREB-15-15 (dB)	shelf filter.  Decrement the treble boost level of a single output or stereo pair. This requires that the output biquad filter 2 is
Treble Down	[U#O#TREBD]	U1-4, O1-16	a high shelf filter.
	[[	,	Increment the treble boost level of a single output or stereo pair. This requires that the output biquad filter 2 is a
Treble Up	[U#O#TREBU]	U1-4, O1-16	high shelf filter.
			Advanced DSP
Bypass Filter	[U#O##B#BYPASS]	U1-4, O1-16, B1-7	Bypass the biquad filter on the single output or stereo pair.
Highpass Filter	[U#O##B#HPF####]	U1-4, O1-16, B1-7, HPF1-20,000 (Hz)	Enables a high pass filter in the specified biquad and single output or stereo pair. The filter is a second order filter, resulting in a -3 dB pass band at the crossover frequency and dropping at -40 dB per decade below.
r ligripass r liter		U1-4, O1-16, B1-7, HS-15-15 (dB), F1-	intel, resulting in a -5 db pass band at the crossover frequency and dropping at -40 db per decade below.
Highshelf Filter	[U#O##B#HS##F####]	20,000 (Hz)	Enable a high shelf filter in the specified biquad and single output or stereo pair.
			Enables a low pass filter on the specified biquad and single output or stereo pair. The filter is a second order
Lowpass Filter	[U#O##B#LPF####]	U1-4, O1-16, B1-7, LPF1-20,000 (Hz)	filter, resulting in a -3 dB pass band at the crossover frequency and dropping at -40 dB per decade above.
Lowshelf Filter	[U#O##B#LS##F####]	U1-4, O1-16, B1-7, LS-15-15 (dB), F1-20,000 (Hz)	Enable a low shelf filter in the specified biquad and single output or stereo pair.
LOWSHEII I IIICI	[0#0##B#E3##1 #####]	Unit 1-4, Output 1-16, Biguad 1-7,	Eliable a low shell little in the specified biquad and single output of stereo pail.
		Peaking Boost (-15 to 15 dB),	Enable a peaking filter in the specified biquad and single output or stereo pair. A peaking filter is basically a
Peaking Filter	[U#O##B#P##F####]	Frequency (1-20000 Hz)	parametric equalizer, allowing a boost or cut at the frequency of interest.
			Override
			Audio Override
			Perform an audio override action, which causes an override to turn on or off. Turning an override off causes the
			outputs that are a member of the override to be set back to their default output level and input connection.
		U1-4, AO1-10, A0-2 (0 off, 1 on, 2	
Action	[U#AO##A#]	toggle)	outputs that are a member of the override to be set back to their default output level and input connection.  Turning an override on connects the output(s) that are members of the audio override to be set to the override
Action Add	[U#AO##O##V##A]	toggle) U1-4, AO1-10, O1-16, V-80-0 (dB)	outputs that are a member of the override to be set back to their default output level and input connection.  Turning an override on connects the output(s) that are members of the audio override to be set to the override input and volume level. Outputs that are muted or powered off will be turned on and unmuted for the duration of the override.  Add a single output or a stereo pair to an audio override.
		toggle)	outputs that are a member of the override to be set back to their default output level and input connection.  Turning an override on connects the output(s) that are members of the audio override to be set to the override input and volume level. Outputs that are muted or powered off will be turned on and unmuted for the duration of the override.  Add a single output or a stereo pair to an audio override is activated.  Set the input(s) that are connected when the audio override is activated.
Add Input	[U#AO##O##V##A] [U#AO##I##]	toggle) U1-4, AO1-10, O1-16, V-80-0 (dB) U1-4, AO1-10, I1-20	outputs that are a member of the override to be set back to their default output level and input connection.  Turning an override on connects the output(s) that are members of the audio override to be set to the override input and volume level. Outputs that are muted or powered off will be turned on and unmuted for the duration of the override.  Add a single output or a stereo pair to an audio override.  Set the input(s) that are connected when the audio override is activated.  Set the priority level of the audio override. Lower numbers equal a higher priority (priority 1 is the highest).
Add Input Priority	[U#AO##O##V##A] [U#AO##I##] [U#AO##P##]	toggle) U1-4, AO1-10, O1-16, V-80-0 (dB) U1-4, AO1-10, I1-20 U1-4, AO1-10, P1-14	outputs that are a member of the override to be set back to their default output level and input connection.  Turning an override on connects the output(s) that are members of the audio override to be set to the override input and volume level. Outputs that are muted or powered off will be turned on and unmuted for the duration of the override.  Add a single output or a stereo pair to an audio override.  Set the input(s) that are connected when the audio override is activated.  Set the priority level of the audio override. Lower numbers equal a higher priority (priority 1 is the highest).  Multiple overrides can have the same priority. Overrides of the same priority will override each other.
Add Input Priority Query	[U#AO##O##V##A] [U#AO##I##] [U#AO##P##] [U#AO##Q]	toggle) U1-4, AO1-10, O1-16, V-80-0 (dB) U1-4, AO1-10, I1-20 U1-4, AO1-10, P1-14 U1-4, AO1-10	outputs that are a member of the override to be set back to their default output level and input connection. Turning an override on connects the output(s) that are members of the audio override to be set to the override input and volume level. Outputs that are muted or powered off will be turned on and unmuted for the duration of the override.  Add a single output or a stereo pair to an audio override.  Set the input(s) that are connected when the audio override is activated.  Set the priority level of the audio override. Lower numbers equal a higher priority (priority 1 is the highest). Multiple overrides can have the same priority. Overrides of the same priority will override each other.  Query an audio override, which displays membership, levels, input, and priority.
Add Input Priority Query Remove	[U#AO##O##V##A] [U#AO##I##] [U#AO##P##] [U#AO##Q] [U#AO##O##R]	toggle) U1-4, AO1-10, O1-16, V-80-0 (dB) U1-4, AO1-10, I1-20 U1-4, AO1-10, P1-14 U1-4, AO1-10 U1-4, AO1-10	outputs that are a member of the override to be set back to their default output level and input connection. Turning an override on connects the output(s) that are members of the audio override to be set to the override input and volume level. Outputs that are muted or powered off will be turned on and unmuted for the duration of the override.  Add a single output or a stereo pair to an audio override.  Set the input(s) that are connected when the audio override is activated.  Set the priority level of the audio override. Lower numbers equal a higher priority (priority 1 is the highest).  Multiple overrides can have the same priority. Overrides of the same priority will override each other.  Query an audio override, which displays membership, levels, input, and priority.  Remove a single output or a stereo pair from an audio override.
Add Input Priority Query	[U#AO##O##V##A] [U#AO##I##] [U#AO##P##] [U#AO##Q]	toggle) U1-4, AO1-10, O1-16, V-80-0 (dB) U1-4, AO1-10, I1-20 U1-4, AO1-10, P1-14 U1-4, AO1-10 U1-4, AO1-10 U1-4, AO1-10, O1-16 U1-4, AO1-10	outputs that are a member of the override to be set back to their default output level and input connection. Turning an override on connects the output(s) that are members of the audio override to be set to the override input and volume level. Outputs that are muted or powered off will be turned on and unmuted for the duration of the override.  Add a single output or a stereo pair to an audio override.  Set the input(s) that are connected when the audio override is activated.  Set the priority level of the audio override. Lower numbers equal a higher priority (priority 1 is the highest). Multiple overrides can have the same priority. Overrides of the same priority will override each other.  Query an audio override, which displays membership, levels, input, and priority.
Add Input Priority Query Remove	[U#AO##O##V##A] [U#AO##I##] [U#AO##P##] [U#AO##Q] [U#AO##O##R]	toggle) U1-4, AO1-10, O1-16, V-80-0 (dB) U1-4, AO1-10, I1-20 U1-4, AO1-10, P1-14 U1-4, AO1-10 U1-4, AO1-10 U1-4, AO1-10, O1-16 U1-4, AO1-10	outputs that are a member of the override to be set back to their default output level and input connection. Turning an override on connects the output(s) that are members of the audio override to be set to the override input and volume level. Outputs that are muted or powered off will be turned on and unmuted for the duration of the override.  Add a single output or a stereo pair to an audio override.  Set the input(s) that are connected when the audio override is activated.  Set the priority level of the audio override. Lower numbers equal a higher priority (priority 1 is the highest). Multiple overrides can have the same priority. Overrides of the same priority will override each other.  Query an audio override, which displays membership, levels, input, and priority.  Remove a single output or a stereo pair from an audio override.  Clear the membership status of all overrides.  lexport Override  Perform a flex-port override action, which causes an override to turn on or off. Turning an override off causes
Add Input Priority Query Remove	[U#AO##O##V##A] [U#AO##I##] [U#AO##P##] [U#AO##Q] [U#AO##O##R]	toggle) U1-4, AO1-10, O1-16, V-80-0 (dB) U1-4, AO1-10, I1-20 U1-4, AO1-10, P1-14 U1-4, AO1-10 U1-4, AO1-10 U1-4, AO1-10, O1-16 U1-4, AO1-10	outputs that are a member of the override to be set back to their default output level and input connection.  Turning an override on connects the output(s) that are members of the audio override to be set to the override input and volume level. Outputs that are muted or powered off will be turned on and unmuted for the duration of the override.  Add a single output or a stereo pair to an audio override.  Set the input(s) that are connected when the audio override is activated.  Set the priority level of the audio override. Lower numbers equal a higher priority (priority 1 is the highest).  Multiple overrides can have the same priority. Overrides of the same priority will override each other.  Query an audio override, which displays membership, levels, input, and priority.  Remove a single output or a stereo pair from an audio override.  Clear the membership status of all overrides.  export Override  Perform a flex-port override action, which causes an override to turn on or off. Turning an override off causes the outputs that are a member of the override to be set back to their default output level and input connection.
Add Input Priority Query Remove	[U#AO##O##V##A] [U#AO##I##] [U#AO##P##] [U#AO##Q] [U#AO##O##R]	toggle) U1-4, AO1-10, O1-16, V-80-0 (dB) U1-4, AO1-10, I1-20 U1-4, AO1-10, P1-14 U1-4, AO1-10 U1-4, AO1-10 U1-4, AO1-10, O1-16 U1-4, AO1-10	outputs that are a member of the override to be set back to their default output level and input connection. Turning an override on connects the output(s) that are members of the audio override to be set to the override input and volume level. Outputs that are muted or powered off will be turned on and unmuted for the duration of the override.  Add a single output or a stereo pair to an audio override.  Set the input(s) that are connected when the audio override is activated.  Set the priority level of the audio override. Lower numbers equal a higher priority (priority 1 is the highest). Multiple overrides can have the same priority. Overrides of the same priority will override each other.  Query an audio override, which displays membership, levels, input, and priority.  Remove a single output or a stereo pair from an audio override.  Clear the membership status of all overrides.  lexport Override  Perform a flex-port override action, which causes an override to turn on or off. Turning an override off causes the outputs that are a member of the override to be set back to their default output level and input connection. Turning an override on causes a variety of results depending upon on command. Consider stereo outputs (1,2)
Add Input Priority Query Remove	[U#AO##O##V##A] [U#AO##I##] [U#AO##P##] [U#AO##Q] [U#AO##O##R]	toggle) U1-4, AO1-10, O1-16, V-80-0 (dB) U1-4, AO1-10, I1-20 U1-4, AO1-10, P1-14 U1-4, AO1-10 U1-4, AO1-10 U1-4, AO1-10, O1-16 U1-4, AO1-10	outputs that are a member of the override to be set back to their default output level and input connection. Turning an override on connects the output(s) that are members of the audio override to be set to the override input and volume level. Outputs that are muted or powered off will be turned on and unmuted for the duration of the override.  Add a single output or a stereo pair to an audio override.  Set the input(s) that are connected when the audio override is activated.  Set the priority level of the audio override. Lower numbers equal a higher priority (priority 1 is the highest). Multiple overrides can have the same priority. Overrides of the same priority will override each other.  Query an audio override, which displays membership, levels, input, and priority.  Remove a single output or a stereo pair from an audio override.  Clear the membership status of all overrides.  lexport Override  Perform a flex-port override action, which causes an override to turn on or off. Turning an override off causes the outputs that are a member of the override to be set back to their default output level and input connection. Turning an override on causes a variety of results depending upon on command. Consider stereo outputs (1,2) and mono output (3), as well as flex port input (17), which is override 1. Action on stereo connects (1,2) to
