

Microphone Input Transformer

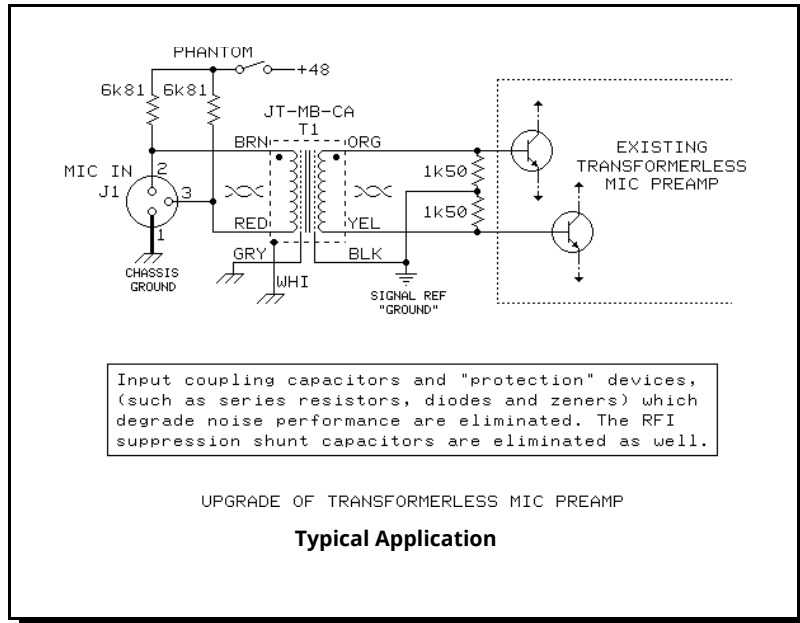

1:1 FOR ULTRA-LOW NOISE AMPLIFIERS

- Ideal retrofit to solve problems with transformerless preamps
- Dual Faraday shields provide very high CMRR: 122 dB at 60 Hz
- Eliminates complex circuitry required to block 'phantom' power
- Excellent frequency response and time domain performance
- Low transformer related Noise Figure

This transformer is designed to couple a nominal 150 Ω mic to the 3 kΩ input impedance typical of 'transformerless' preamps. Both windings are fully balanced and either may be reversed to invert polarity. A 30 dB magnetic shield package is standard. Not recommended for mic 'splitter' applications (use JT-MB-C).

#30 AWG (7x38) UL STYLE 1061 COLOR CODED WIRE LEADS, 8" MINIMUM LENGTH

USE ONLY #4 TYPE B SELF TAPPING SCREWS IN HOLES "M". ALLOW NO MORE THAN 0.15" PENETRATION INTO TRANSFORMER HOUSING.

IMPORTANT NOTE: This device is NOT intended for use in life support systems or any application where its failure could cause injury or death. The breakdown voltage specification is intended to insure integrity of internal insulation systems; continuous operation at these voltages is NOT recommended. Consult our applications engineering department if you have special requirements.
